

**Social and Environmental Responsibility Policy
On Greenhouse Gas Emissions**

THAI AUTO TOOLS AND DIE PUBLIC COMPANY LIMITED

("The Company") and Subsidiaries ("Group")

Social and Environmental Responsibility Policy on Greenhouse Gas Emissions

Thai Auto Tools and Die Public Company Limited (“**the Company**”) and its subsidiaries (collectively referred as the “**Group**”) recognizes the importance of global warming and greenhouse gas (GHG) emissions. Mainly caused by carbon dioxide (CO₂), climate change leads to global surface temperature changes and increasingly severe natural disasters that affect people's lives and well-being. The Company is aware of the problems and potential future impacts because the Company's business operations are directly involved in greenhouse gas emissions. Therefore, the Company has established the Social and Environmental Responsibility Policy on Greenhouse Gas Emissions (carbon footprint) along with measures to reduce greenhouse gas emissions in line with the guidelines of the Thailand Voluntary Emission Reduction Program (T-VER), which is a mechanism aimed at promoting participation by all sectors in reducing greenhouse gas emissions in Thailand, particularly producers and users of renewable energy. Furthermore, the Company has established a strategy for greenhouse gas management by promoting the use of carbon footprint symbols on the Company's products along with the use of renewable energy sources and other important methods. The policy is detailed as follows:

1. Greenhouse Gas (GHG) Emissions

- Use renewable energy: Since the Group's product manufacturing process relies on machinery that uses relatively high amounts of electricity, the Company has a policy for the Group to use renewable energy or generate electricity for use by using solar energy or photovoltaic systems. Since the Company has large buildings and factories, it is appropriate to install solar panels on them to reduce energy use and lower the Company's costs.
- Improve the logistics system: Transport goods in full truckloads to reduce the number of deliveries, transportation costs, and greenhouse gas emissions. In doing so, the Company uses efficient transportation routes, including directly transporting from the Company to customers, in addition to using other fuels or alternative energy to reduce oil consumption.

- The Company has a policy to select machinery or tools with high-quality production lines that can help reduce electricity consumption for the manufacturing and processing of various products that might lead to higher production costs in the Company's operations. However, in doing so, the Company will still be able to output quality products that meet customer standards in line with the strategy to produce quality products that meet customer needs.
- As for wastewater treatment and other processes in the production of goods of the Group, wastewater treatment is carried out by using scientifically correct methods under the legal requirements and standards for industrial factories. In doing so, the Company uses high quality machinery to help minimize waste.
- In addition, the Company has a policy to increase green spaces by promoting tree planting to increase green spaces in society.

The Company believes that these measures will contribute to the campaign for the reduction of global warming and GHG emissions from the Company's business operations in the long term and also help to promote a good image for the organization.

This policy was approved by the Board of Directors Meeting No. 4/2025 on 14 November 2025, effective from 14 November 2025 onwards.
